

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

- 1-20. (Canceled)
21. (Currently Amended) A child seat comprising:
a seat portion including a base having a seating surface; and
~~an object holder; wherein the object holder is attached to the base and movable between an extended, in use position and a retracted, storage position;~~
wherein the object holder includes a receptacle cavity for receiving objects;
~~wherein the object holder is movable to a storage position; and~~
wherein the receptacle cavity is partially under the seating surface in the retracted,
storage position.
22. (Original) The child seat of claim 21, wherein the object holder is pivotally attached to
the base.
23. (Original) The child seat of claim 21, wherein the object holder includes an extension
slidably connected to the base and positioned under the seating surface.
24. (Previously Presented) The child seat of claim 23, wherein the extension includes a
slot, and the base includes a post positioned in the slot to limit a sliding motion of the object
holder.
25. (Previously Presented) The child seat of claim 21, further comprising a second object
holder attached to the base.
26. (Currently Amended) The child seat of claim 21, wherein the object holder is
configured so that when the object holder is moved ~~under the seating surface to the retracted,~~

storage position, a portion of the object holder remains accessible, thereby providing a gripping surface.

27-58. Canceled.

59. (Currently Amended) A child seat comprising:

~~a seating surface on a base having a seating surface~~; and

an object holder movably attached to the base to move between an extended, in-use position and a retracted, storage position, the object holder having a cavity for receiving objects;

wherein when the object holder is in the retracted, storage position, a first portion of the ~~object holder cavity~~ extends beyond the ~~an outer side~~ surface of the base, and a second portion of the ~~object holder cavity~~ does not extend beyond the outer side surface of the base.

60. (Previously Presented) The child seat of claim 59, wherein the object holder is pivotally attached to the base.

61. (Previously Presented) The child seat of claim 59, wherein the object holder includes an extension slidably connected to the base and positioned under the seating surface.

62. (Previously Presented) The child seat of claim 61, wherein the extension includes a slot, and the base includes a post positioned in the slot to limit a sliding motion of the object holder.

63. (Previously Presented) The child seat of claim 59 further comprising a second object holder attached to the base.

64. (New) A child seat comprising:

a base having a seating surface; and

an object holder attached to the base and movable in and out of the base between an extended, in use position and a retracted, storage position, the object holder having a cavity for receiving objects;

wherein the object holder only partially retracts within the base in the retracted, storage position such that a first portion of the cavity remains extended from the base and a second portion of the cavity retracts within the base.

65. (New) The child seat of claim 64, wherein the object holder is pivotally attached to the base.

66. (New) The child seat of claim 64, wherein the object holder is slidably attached to the base.

67. (New) The child seat of claim 64, wherein the object holder includes an extension slidably connected to the base and positioned under the seating surface.

68. (New) The child seat of claim 67, wherein the extension includes a slot, and the base includes a post positioned in the slot to limit a sliding motion of the object holder.

69. (New) The child seat of claim 64, further comprising a second object holder attached to the base.

70. (New) The child seat of claim 64, wherein the object holder is configured so that when the object holder is moved to the retracted, storage position, a portion of the object holder remains accessible, thereby providing a gripping surface.
